P94/01

SYSTEM P94

Double glass sliding doors available with **automatic or manual** closing system.

System P94 is suitable for the application on vertical cabinets of medium dimensions/backcase with **positive temperature** and gives a good visibility to the displayed products.

The opening functioning is easy and intuitive for the final Customer.

Assembling P94 to the cabinet/backcase is easy and quick. The functioning and the durability are guaranteed.

Good quality/price ratio.

Brief technical description

1) The perimetral frame is composed by **aluminum** and can be:
   - built-in;
   - staff bead frame.

2) The sliding doors are assembled with a perimetral **aluminum** frame, available in two versions:
   - with glass inserted in the frame;
   - total view glass, serigraphic printed.

3) Double glasses are composed as follows:
   - internal tempered glass with low-emissivity treatment, thickness 4mm;
   - central “super spacer”, thickness 7mm;
   - external tempered glass, thickness 4mm.

   In the total glass view version, the glass is provided with a screen-printing applied on the external glass to cover the “super spacer”. The serigraphic print color depends on the aluminum profiles finish, the standard color is RAL7040.

4) Doors with glass inserted in the frame version are provided with an integrated opening handle on the vertical perimetral frame. Total view glass versions are provided with a handle glued on the glass.

5) In the self-closing version, in order to facilitate the loading and cleaning operations, P94 is provided with a sliding door block kit (code P00.0026.00) and, as additional component, with End-of-stroke shock absorber kit (P94.0094.00).

6) P94 provides a security key locking system as an optional item (code P00.0020.00) for doors with glass inserted in the frame.

7) It is possible to install an electrical resistance on the perimetral frame for the heating of the frame itself thus reducing the formation of condensation. It is also possible to install a gasket between perimetral frame and cabinet to close potential gaps between them..

8) The P94 built-in frame version gives the possibility to channel more frames.

9) The products design is pleasant and allows very easy and quick cleaning operations. Furthermore, on request, we can insert an additional process on the lower profile to facilitate the cleaning of the perimetral frame..

10) We are specialized in supplying complete doors with double glass assembled according to the Customers requested measures.

11) Frames and doors can be supplied in very useful cut and pre-processed profiles and accessories kit allowing the Customer to purchase double glass independently.

12) The complete P94 system is delivered with a detailed assembling instructions manual.

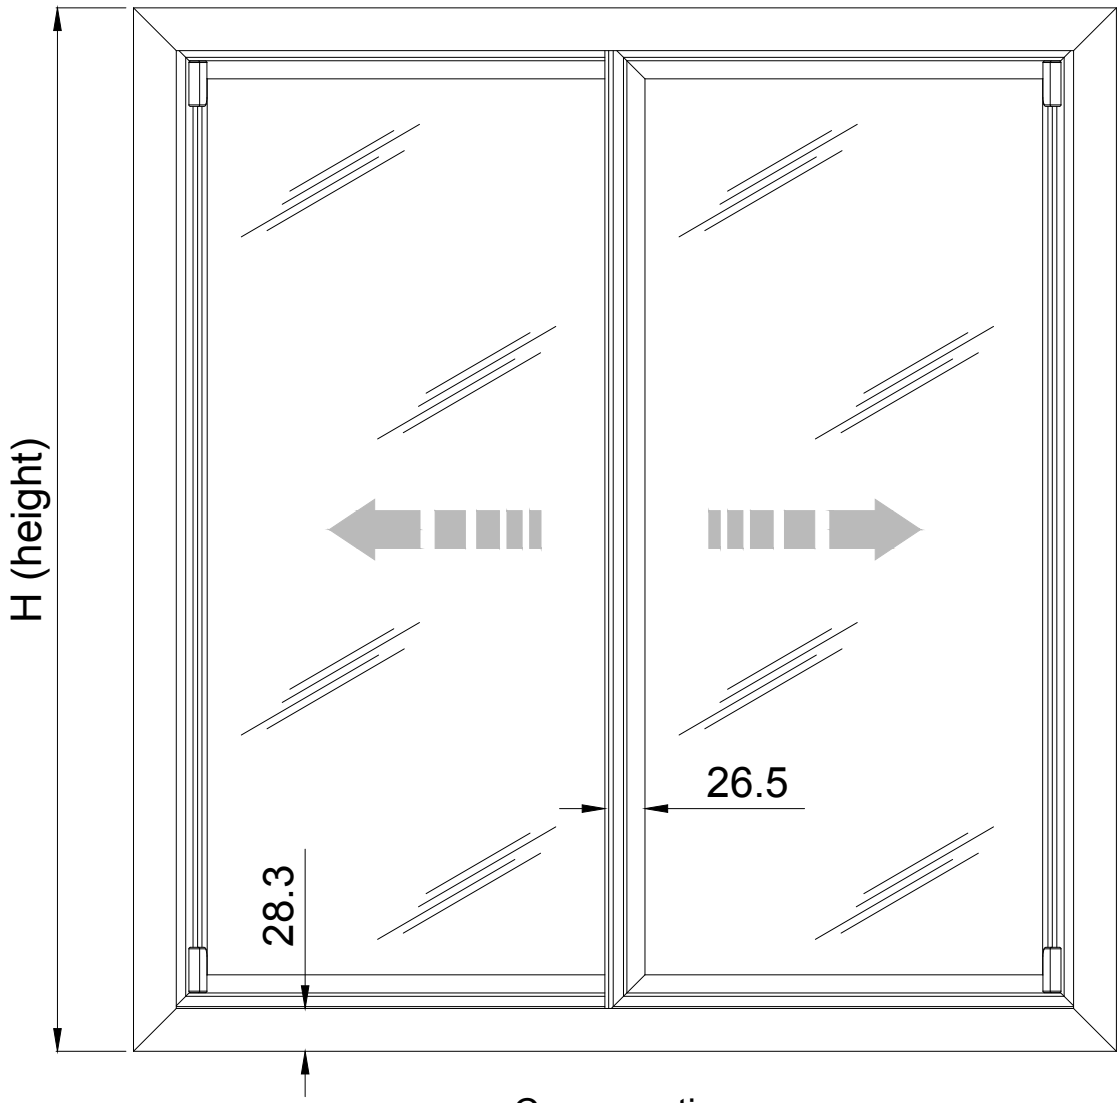

Logik Doors™ products are made by NEM srl, UNI EN ISO 9001-certified company.

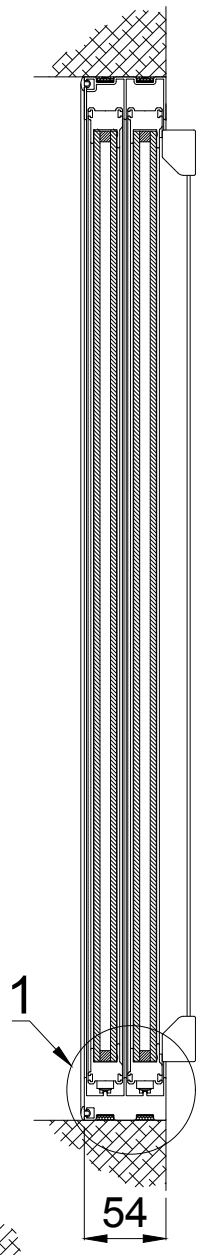

NEM srl is responsible for the quality and the compliance of the aesthetic, structural and dimensional characteristics regarding all the profiles and components available on their catalogue and supplied by it.

NEM srl disclaims all liability for the quality, functioning and safety of the final product, which may arise due to a modification, procession or assembly of the Customer or any other person, using accessories and components of their systems, or in case of improper use.
